Adokapı may change these technical specifications.

TECHNICAL SPECIFICATION

- Composite material.

- Not affected by water and moisture.

Decorative Top Cornice

35

In Fagus and Cedrus ranges, water and moisture resistance are valid only for frames and cornice. Adokapı products are interior doors. If they are used outdoors, factory warranty is not provided.

DOOR ASSEMBLY

Frame edge jointing apparatuses are fitted as shown in the figure and their edges are jointed.

Hinges are screwed to the leaf with the upper hinge center 250 mm and lower hinge center 300 mm.

Apply polyurethane foam in the gap between the frame and wall. After drying, remove the foam residues.

Double-side adjusted cornice are cut according to the measurement and fitted by using a plastic hammer.

OUR ASSEMBLY MATERIALS

Sashe - Cornice- Hinge - Screws- Lock

The frame is placed in the wall gap in the middle. Squeezing pins are placed in the upper and side gaps and fixed by adjusting with the measurement gauge.

Upper hinge center is screwed to the frame as 254 mm from above.

Lock is screwed to the drilled area in the frame.

For Deodara range doors, ADOKAPI label is screwed on the lower and upper edge of the leaf as shown in the figure.

Adjust the internal measurement between sashe and frame as 3.5 mm by using an adjuster. Frame - Sashe balance should be checked again.

Lock and handle suitable for the leaf are fitted by screwing them.

STACKING CONDITIONS

- 1- Pallet packaging of the door components that will be kept in the stocks should not be opened unless needed.
- 2- Stacking floor should be flat and levelled.

3- Stacks should be supported in the horizontal position with minimum 3 wedges. They should not be stacked vertically even in the construction sites.

4- Ensure that the wedges to be used for stacking have equal sizes and are not twisted.

5- Wedges should be placed in between the stacks to be placed on top of each other at the same level of the wedges on the floor.

6- Base pallet should be placed on top of the door leaves that will not be removed for a long time.

7- Products should not be stacked in the warehouses with insufficient ventilation and air-conditioning (ensure 22-24 degrees and 8-12% balance moisture).

8- Make sure that the products are not exposed to direct sunlight, wind and water.

9- Protect the products against any damages that might occur due to the use of forklift for loading and unloading.
